

ABOUT THE CHALLENGE

CM is in need of a grievance dashboard for that we are finding brilliant teams and minds to help create something powerful for the CM. Based on the submissions, if we fail to find a complete system and ideas, the best teams will be selected, their best features will be selected, clubbed together to work as a combined team, lead by one of you and monitored by us to communicate CM requirements.

The final team and best minds get to present their dashboard to CM and get it implemented in Delhi. If the CM likes your dashboard she'll give the responsibility of making it production scale and managing it to your team. Based on the active team strength and CM's interest in the dashboard students might be selected for upcoming Delhi government internships, and our internships in the near future.

MOST ASKED QUESTIONS AND THEIR ANSWERES

1. Do we have to travel to Delhi for submission? **No, Everything until CM finalizes is an online process.**
2. Is it a physical hackathon: **No**
3. Can we use free/open-source alternatives for the MVP and later switch to paid services if the project moves toward actual deployment? **Yes, Go for good open source alternatives if it exists, we highly appreciate this.**
4. Maximum team size: **5**
5. Is this an official part of India Innovates Hackathon: **Yes and No, It's a separate opportunity shared only to the hackathon participants in our ongoing vision to involve and connect more talented young people with the government. Delhi government wants to work with young minds and implement brilliant ideas to solve various problems, all these initiatives are a part of that vision of finding best minds and solutions.**
6. Is there any incentive/stipend for this: **Not for MVP, Only If CM likes the project and decides to get the project implemented.**
7. What are the next steps:
 - a. We will select the best of the best projects, if we don't find a complete solution we might make the teams come together and create a complete system using the teams best features, the final combined team's best minds will be selected to demonstrate the Dashboard to CM Rekha Gupta.
 - b. The first round of evaluation will be based on the following criteria:
 - i. The Idea: Identify any one issue that CM faces and make sure to make the best solution for it.
 - ii. Ease of use for both citizens and CM.
 - iii. Simple yet highly efficient UI for non technical staff on Admin side (important)

- iv. Out of the box Ideas, Make sure to **reduce false closures and corruption**
- v. Compatibility with the MCD311 and other department apps (assume you'll get the apis from the teams and mock the response, Make sure the app does not fail if the govt don't provide the apis, but It's a must have)
- vi. simple yet powerful employee dashboard as a fallback if we don't get apis, where employees can see its assigned complaints by CM.
- vii. Good to have and technical requirements:
 - 1. Critical life threatening complaint alerts
 - 2. Auto segregation algorithm
 - 3. Officers contacts and bandwidth and active works overview

c. Use MERN/NEXTJS for maximum compatibility

Make your solutions with future perspective, it should be super easy to add more complaint types, more departments, responsible officers, etc.

Some ideas:

Find solutions for such use cases (not limited to this, these are just for reference, find what can be helpful and make the best solution for it):

- 1. Keep at least 2 roles (CM, team) (you can have more based on your research)
- 2. Keep it mobile friendly for CM view.
- 3. If you can show nearby problems when the CM is on a visit in some area.
- 4. Visit logs
- 5. Social media connected complaints and sharing etc...

As said, in the limited time you have, create the best solution, your project does not need to have everything that's mentioned but whatever you think is important for a CM grievance dashboard, think of all ifs and buts, how employees will manipulate your system to show false reports, it's prevention and more.
